20 January 1960

MEMORANDUM FOR:  Chief, ADG

SUBJECT        :  Code Input for Intellofax

1.  In discussions, concerning the method used by the Bureau of Census for marking answers on questionaires so that such data can be "sensed" for input to computers, the thought occurred to me that a similar method could be used for code input into Intellofax.

2.  Instead of using the present code sheet, we could devise one with the various digits arranged so that "fixed field" data and subject and area codes could be marked by circling the appropriate digits.  All we need then is a "sensing" machine to punch the IBM cards for our input operation.

3.  Is this possible?
